

Easy-to-Handle and Safe Phosphitylation Reagent for DNA and RNA Fragment Synthesis

Advantage

- More thermally-stable and easier to handle than other phosphitylation reagents

Protected 2'-deoxyribo and ribonucleoside-3'-phosphoramidites, which have been widely used for syntheses of DNA and RNA fragments, are prepared from *N,O*-diprotected nucleosides and a phosphitylation reagent with an activator such as 1*H*-tetrazole. **C2228** has been the reagent of frequent choice for phosphitylation due to its ease in handling and safety.¹⁾

- 1) Synthesis of protected nucleoside-3'-phosphoramidites using **C2228**
